

## What is IHI Vibration Monitoring Service?

Data from the wireless sensors which can detect both surface temperature and vibration are sent to the self managed IoT dashboard. With the IHI data reports, machine deterioration and abnormality can be early detected, thereby reducing unforeseen system interruption.

With over 25 years of analysis experience, IHI knows that our services help valued customer with the advance maintenance and overhaul planning of all machinery. Supporting our customers to achieve best operation efficiency and stable plant operation.
